# So, what "automotive diagnostics" actually means?

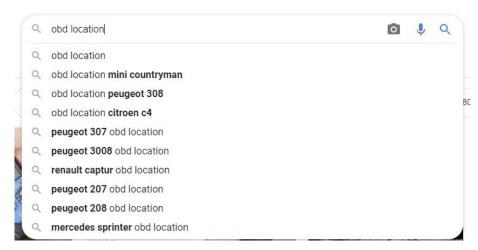

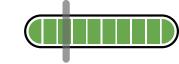

### **OBD-II**

Has to be within 60cm from the steering wheel. All currently produced cars have it.

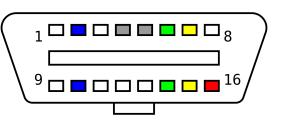

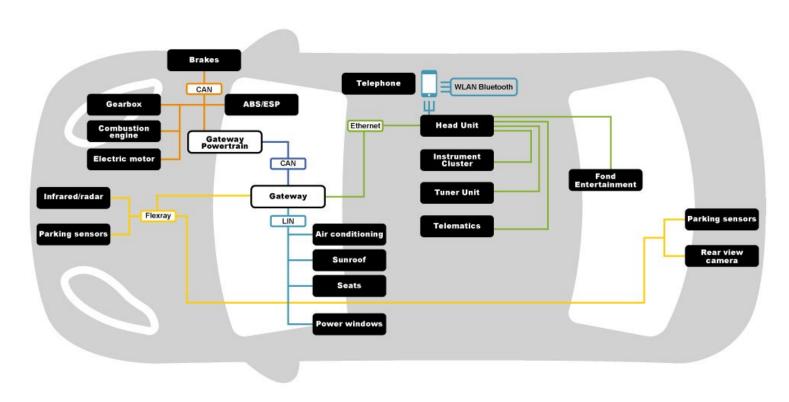

### **OBD-II**

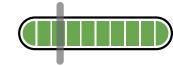

1	Manufacturer discretion. GM: J2411 GMLAN/SWC/Single-Wire CAN. VW/Audi: Switched +12 to tell a scan tool whether the ignition is on.	9	Manufacturer discretion. GM: 8192 baud ALDL where fitted. BMW: RPM signal.
2	Bus positive Line of SAE J1850 PWM and VPW	10	Bus negative Line of SAE J1850 PWM only (not SAE 1850 VPW)
3	Manufacturer discretion. Ford DCL(+) Argentina, Brazil (pre OBD-II) 1997–2000, USA, Europe, etc. Chrysler CCD Bus(+) Ethernet TX+ (Diagnostics over IP)	11	Manufacturer discretion. Ford DCL(-) Argentina, Brazil (pre OBD-II) 1997–2000, USA, Europe, etc. Chrysler CCD Bus(-) Ethernet TX- (Diagnostics over IP)
4	Chassis ground	12	Not connected Manufacturer discretion: Ethernet RX+ (Diagnostics over IP)
5	Signal ground	13	Manufacturer discretion. Ford: FEPS - Programming PCM voltage Ethernet RX- (Diagnostics over IP)
6	CAN high (ISO 15765-4 and SAE J2284)	14	CAN low (ISO 15765-4 and SAE J2284)
7	K-line of ISO 9141-2 and ISO 14230-4	15	L-line of ISO 9141-2 and ISO 14230-4
8	Manufacturer discretion.  Many BMWs: A second K-line for non OBD-II (Body/Chassis/Infotainment) systems.  Activate Ethernet (Diagnostics over IP)	16	Battery voltage

# **Diagnostics in AUTOSAR - DET**

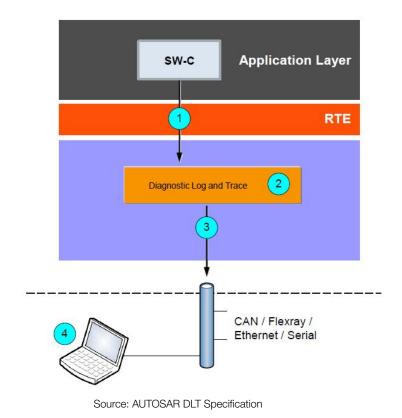

Due to the always specific (non generic!) requirements regarding functionality in error cases there is no explicit specification of the DET implementation, except:

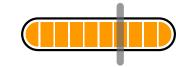

- Configurable lists of error hooks will be executed in case of an error report.
- Interfaces will be provided to report errors, allow optional error recovery after reset, to handle optional error recovery information and to retrieve version information.
